

ROTOCER 8834

Water-soluble medium for roller or stamp decoration

Chemical basis:

Special composition of derivatives of ethylene oxide and alcohol

Characteristics:

Appearance: transparent liquid
Solubility: water-soluble in all proportions
Specific gravity (25 °C): approx. 1.08 g/cm³
Viscosity (30 °C): approx. 20 mPas

Shelf-life / Packaging:

12 months under proper storage conditions
drums of 200 kg and containers of 1000 kg

Application:

ROTOCER 8834 is a water-soluble medium which has been suitably studied for preparing pastes for the ink-roller machines. It is specifically formulated for "thickened" decoration, i.e. for achieving a greater quantity of pastes to be applied on the pieces.

ROTOCER 8834 contains synthetic resins and surfactants, which act as suspending agents for the prepared pastes, thereby avoiding density changes and sedimentation, while keeping the viscosity constant. This makes it possible to achieve smooth surfaces like a serigraphic print. It also prevents variations in the decoration shade.

The recommended mixture is

ROTOCER 8834	50 - 60 parts
Powder	100 parts

The above results have been obtained from trials in our laboratory and plant. In the light of changing conditions they can serve only as a guide and are therefore offered without obligation. We ask you to observe the possible rights of third parties.
