

# SULFETAL 4069

## Wetting agent for chemical/technical applications

### Chemical composition

Sodium alkyl sulfate

Appearance: colourless to yellowish liquid  
Ionic character: anionic

### Typical data

Anionic active ingredient: 43 %

### Application

SULFETAL 4069 is a highly effective, moderately foaming wetting agent for strong alkali, acid and electrolyte containing products.

SULFETAL 4069 has pronounced hydrotrope properties, particularly with regard to nonionic surfactants.

The stability of SULFETAL 4069 with regard to the kind and concentration of acids and alkalis used should be tested in every case, also considering the other components of the formulation, such as oxidizing agents.

### Application fields:

Alkaline metal degreasing, acid metal cleaning, mercerizing wetting agents in textile industry, alkaline and acid cleaners for household and industrial application.

### Storage

The product should be stored between +2 and +30 °C. Sedimentation is possible, therefore it is recommended to homogenise the product with stirring and slightly heating up to max. 30 °C just prior to use. It is recommended to use the content of an opened container completely at once.

The above results have been obtained from trials in our laboratory and plant. In the light of changing conditions they can serve only as a guide and are therefore offered without obligation. We ask you to observe the possible rights of third parties.
