

DOLAFIX 155

Glaze fixative

Chemical basis:

Polymers in aqueous solution

Characteristics:

Appearance: viscous, white liquid
Solubility: water-miscible
Viscosity (20 °C): approx. 2500 mPas

Shelf-life / Packaging:

12 months under proper conditions; protect from frost!
drums of 30 and 140 kg, containers of 1000 kg

Application:

DOLAFIX 155 is a glaze fixative for the pretreatment of unfired decorative glazes which permits decoration with ceramic colours by screen printing directly following the application of the glaze.

DOLAFIX 155 is diluted with water in proportions from 1 : 10 to 1 : 20 for spray application (by double disk or spray gun).

DOLAFIX 155 forms a fine film firmly adhering to the glaze which allows printing shortly after its application, and, therefore, makes it possible to combine the application of glaze and decoration in one economical operation.

Residual dried fixing agent can be removed with warm water.

The above results have been obtained from trials in our laboratory and plant. In the light of changing conditions they can serve only as a guide and are therefore offered without obligation. We ask you to observe the possible rights of third parties.
