

# OPTAPIX PAC 60

## Temporary binder

### Chemical basis:

Polyvinyl acetate preparation

### Characteristics:

Appearance: white to yellowish powder  
Solubility: disperses in water  
Bulk density: approx. 500 g/l  
pH (10 %): approx. 5

### Shelf-life / Packaging:

6 months when stored properly and dry  
bags of 20 kg

### Application:

OPTAPIX PAC 60 is a binder for putty and dry mortar.

It promotes good working properties and improves adhesion to the substrate. The time that the mortar or putty remains adhesive is prolonged.

The binder is no longer water-soluble after it has dried.

The mode of action of OPTAPIX PAC 60 as a temporary binder depends on the creation of adhesive forces between the raw material particles, that make them stick together.

Depending on the quality of the mortar, the amount to be added is between 2 and 7 %, related to the solids content of the composition.

The above results have been obtained from trials in our laboratory and plant. In the light of changing conditions they can serve only as a guide and are therefore offered without obligation. We ask you to observe the possible rights of third parties.
