HYDROSET ECO-DRY

The ECOLUTION of moisture management

The speed and efficiency of the wicking process has a decisive impact on the comfort offered by a garment. Functional fabrics that promote moisture transport ("wicking") make sure that sweat and moisture are transported away from the body to the outer surface of the clothing where it can evaporate, thus keeping the body dry and warm.

With our innovative HYDROSET technology, our natural moisture-wicking agent HYDROSET ECO-DRY based on biopolymer and microalgae helps ensure optimum moisture management on synthetic fibres.

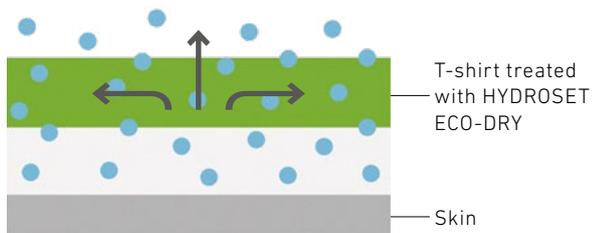

BENEFITS

- ▶ Excellent moisture transport
- ▶ Very good breathability
- ▶ Provides odour control and freshness
- ▶ For all synthetic fibres and blends
- ▶ Excellent durability and fast drying
- ▶ Supports the natural well-being of humans
- ▶ Reduces carbon footprint
